ZimVie Milling Center: An expert in high-end prostheses

You design it, we mill it!

ZimVie can take your expert designs and make them a reality through our simplified case submission and digital workflow.

5-axis machining

The industrial 5-axis machining enables highly precise production of complex structures such as screw-retained implant bridge frame works.

ZimVie Quality

Our milling technology operates with low process forces, and in combination with a long-standing experience, it helps to potentially optimize chip-removal rates with high surface quality.
