Designed for Surgical and Restorative Aesthetics and Efficiency

Heal Naturally. Impress Easily.

Encode Emergence technology provides more natural tissue healing for great aesthetics, and easy scanning and impressing for workflow efficiency.

- Easy, efficient and proven Encode technology with contemporary emergence profile designs, intuitive codes and pink matte appearance.
- Eliminate the healing abutment and impression coping or scanbody swapping process, while delivering soft-tissue healing with natural emergence profile.
- Patients have a better experience and a beautiful aesthetic outcome as compared to traditional procedures with impression copings.

Heal Naturally

Patient Aesthetics Through Hard- and Soft-Tissue Preservation

1

Maintain Tissue Health

- Intact peri-implant mucosa is required for oral health and successful dental Implant integration and maintenance.¹
- Adherent peri-abutment mucosa is credited with reducing and limiting both microbial and oral cavity content through the sulcus to the implant microgap region.¹

2

Clinical Relevance

Studies show:

- Multiple abutment removals (dis/reconnect) negatively affect peri-abutment mucosal and contributes to loss of alveolar crestal bone.²
- Crestal bone resorption leads to soft-tissue recession and reduced aesthetics.^{3,4}

Encode Emergence Healing Abutment

3

Reduced Abutment Swaps

- Design reduces need for multiple abutment removals, preserving peri-abutment interface and maintaining sealing function.
- Unique codes on occlusal surface provide design and milling information, eliminating need for an impression coping.

4

Aesthetic Outcome For The Patient

- One supragingival impression leads to the delivery of the definitive prosthesis.

Natural Tissue Healing Natural Emergence

- Gradually rising emergence profiles shape and facilitate natural tissue healing.
- Mitigates bone profiling when an implant is placed no deeper than 1 mm below the bone crest.
- Healing abutments are available in a range of emergence profile diameters and in three varying heights: 3, 5, and 7 mm.

Mitigates the Need
for Bone Profiling

4 mm (H)
Legacy Encode

3 mm (H)

Tissue-Level Scan or Impression

Intraoral scan or traditional impression possible when abutment occlusal is clear and above soft-tissue.

Insertion and Removal

Easy abutment insertion and removal as screw remains engaged through screw channel internal threads.

Color and Finish

The pink matte appearance closely matches the gingiva's color for aesthetics results after surgery, and reduces intraoral scan reflection for clear scan images.

5 mm (H)

7 mm (H)

Impress Easily

Simplified Intraoral Scans or Traditional Impressions for Aesthetics

Streamlined Process

By eliminating the need for impression copings and conventional impression materials, the process is streamlined and the patient experience is improved.

Intuitive code scheme provide 3D information for CAD/CAM restorative workflow.

Designed for Flexibility

Take a digital or traditional impression.

Intraoral Scanning

Traditional PVS Impression

Benefits for the Patient

Comfort

There is no need to use impression copings, resulting in a less invasive impression procedure for improved patient comfort.

Fewer Visits

The intraoral scan can be taken by the specialist at the surgical release visit, eliminating a restorative appointment and resulting in less visits to the dentist's office compared to traditional procedures.

Aesthetic Outcomes

Abutments designed specifically for the patient's anatomy, for better aesthetic outcomes compared to traditional non-digital procedures.

Customized Restorative Solutions Workflow Options

1

After tissue maturation, take a digital or traditional impression of the Encode Emergence Healing Abutment and send it to your preferred lab partner.

FREE
Software module and decoding!

2

The laboratory decodes* the Encode Emergence Healing Abutment on RealGUIDE™ and proceeds with the CAD Design.**

Practice Growth Through Better Patient Care

*Download the free version of RealGUIDE and decode immediately your Encode Emergence Healing Abutment
**Patient Specific Abutment CAD design require GenTek Library. GenTek Library can be downloaded for free on RealGUIDE, exocad, 3Shape & Dental Wings CAD Softwares

3 Have your dental lab make the prosthesis using a GenTek OEM component, or have your dental technician submit the case for a ZimVie milled patient specific abutment and 3D printed model.

4 The finished prosthesis is ready to be placed.

Efficient Treatment Solutions that optimize the workflow for the entire team

Surgeon

- Cutting edge technology creates an improved and simplified treatment process differentiating the practice for referring dentists and patients.⁵

Laboratory

- Streamlined workflows may lead to increased crown and bridge business.⁶
- No need to create a cast, which results in fewer steps in the treatment process, reducing overhead.⁶
- Unique branding opportunity may grow the volume of your business.⁶

Restorative Clinician

- No implant-level impressions are required minimizing chairtime compared to traditional non-encode procedures.
- Increased patient satisfaction due to an easier and more comfortable impression procedure compared to traditional non-encode cases.

Your ZimVie Path of Digital Dentistry

Suite of connected solutions allows you to choose your course for a precisely positioned, esthetically restored ZimVie Dental Implant.

Provides

- Diverse solutions for surgical planning, fully guided placement and advanced design of restorative components.
- The ability to plan and design yourself or outsource to your chosen lab or one of ZimVie's skilled partners.
- The choice of Encode compatible implants and your preferred customized workflow for a healthy patient smile!

Scan

Use an iTero™ Element Plus Series intraoral scanner to improve the patient experience whenever an impression is taken.

Plan

The RealGUIDE Software Suite offers everything you need for precise planning and predictable implant placement.

Guide

Implant Concierge™ is a web-based platform that acts as your Virtual Treatment Plan Coordinator™ – the one-stop shop for your guided surgery needs.

Place

Take the complexity and inaccuracies out of guided surgery by using either the RealGUIDE Z3D Guided surgery kit or the Navigator® System for fully guided surgery.

Heal and Scan

Naturally shape the soft tissue and efficiently process the final restoration with the easy to use Encode Emergence Impression System.

Restore

Select between GenTek TiBases or pre-milled blanks for patient specific CAD/CAM abutments, designed to match the patient's anatomy, producing a natural emergence profile through the soft tissue.
