Prosthetic Solutions for Superstructures

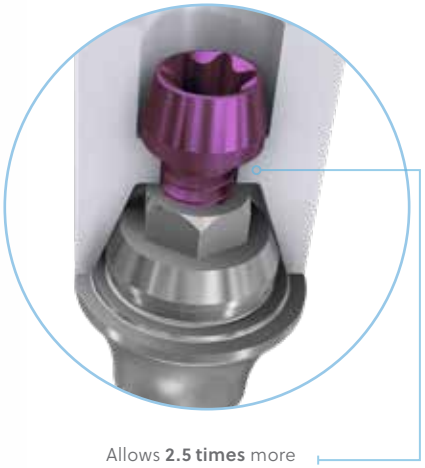
ZimVie

azure™

All on X Screws

Definitive connections for superstructures

- **Higher pre-load** between the structure and the multi-unit abutment providing less screw loosening
- **Flat seat design** allows better control of the screw positioning when tightened
- **Works with any material** – Temporary, metal or zirconia prostheses



Allows **2.5 times** more material below the screw seat!

Flat Seat Design

Optimized for superstructures
to distribute forces evenly around the seating surface

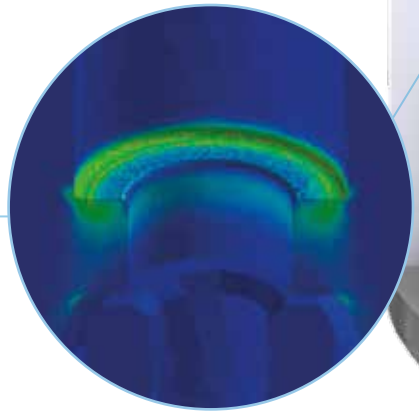
Increased seat thickness allows more resistance for a more stable and durable restoration.

- Less susceptible to breakage
- Ideal for softer materials such as temporary prosthesis

Self centers the screw towards the axis of the multi-unit abutment

Torx ball screw allows angulating the screw channel up to 25° with 360° rotation

Color Anodized for easier identification



All on X Seat
Torque value of 20 Ncm creates a preload of 326 N

All-on-X Full Arch Screws

4.8 mm (P)
