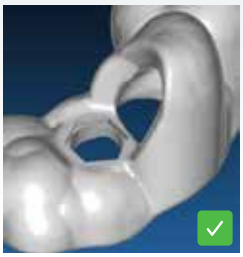
Surgical Guide Design Checklist

Mandatory Checks

The surgical guide is sturdy enough, there are no fragile regions that are likely to break during surgery.

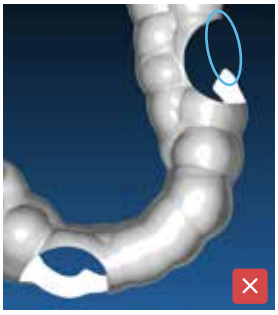
☐

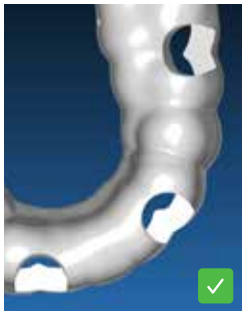
All the sleeves have suitable support to ensure stability during surgery.



☐

Inspection windows should not compromise necessary guide support.





☐

I set the correct sleeves with respect to the surgical kit I plan to use.

☐

Optional According to the Case

If extractions are needed:	
I will remove one or more teeth before fitting the guide. Before designing the guide, I edited the anatomy, taking into consideration the extractions I will perform on the patient before fitting the guide.	☐
If interproximal reduction is needed:	
Before designing the guide, I edited the anatomy, taking into consideration the procedure I will perform on the patient before fitting the guide.	☐
If the sleeve is planned deep in the tissue:	
I planned to reflect a flap or use the tissue punch. Before designing the guide, I edited the anatomy, taking into consideration the procedure I will perform on the patient before fitting the guide.	☐
If sleeve offset was modified:	
I set the correct offset with respect to the drill length available in the surgical kit I plan to use.	☐
